

Connecting drivers to the GRBL controller:

There are two ways to connect the (TB6600) drivers to the GRBL controller, using the screw terminals on the driver, or using the JST connector. I chose the latter because disconnecting then is fast, just one connector. The (mounted) JST connector is easily available on E-bay. I made a simple shield, just having the 3 JST connectors for the drivers and a connector for a Bluetooth or Wi-Fi module.
